

Glassy Carbon Macro Disk Electrode

Product description

Mechanical Dimensions

Sensor product code: 9200049

Storage

The supporting material is Kel-F, which becomes soft and changes shape when temperature is above 60°C. High temperature will cause leakage and sealing failure. Do not bake or boil the electrode. Do not use ultrasonic bath to clean the glassy carbon electrode to avoid damage of the contact. The oxidation of glassy carbon could cause the electrode to be damaged permanently.
